3. SPLASH SCREEN

Before login the CLICK Time Management System, please plug in the system master key. Upon opening the system, a **Splash Screen** appears which loads and verifies the files and database of the system.

4. LOG IN

After the Splash Screen, the **Log In** screen follows which asks you to provide a User Name and Password. The user name provided will be used for the system access depending on the type of the user given. (**Default User Name : supervisor Password : b**)

5. Main Menu

The **Main Menu** contains almost all of the functions that the system provides for easy access by the user. It also displays system's Time and Date and the User that logged-in in the system. Some menus and submenus can only be accessed depending on user type and privileges. These menus are as follows:

- 5.1 File Maintenance** – is use to record and update files for employee profile, shifting schedules, department and leave-type to be used as preference.
- 5.2 Posting** – is use for application and authorization of shifting schedule, logs, leave and overtime if some adjustments are to be made.
- 5.3 Report** – shows the list of every transaction made like time records, logs, overtime, absences and audit trails.
- 5.4 Tools** – shows other features of the system like data transfer, backup and restoration.
- 5.5 Windows** – shows the windows that are currently opened or in use.
- 5.6 Help** – shows the system information and the index which is the system manual.

Tea Break Setting Update Close

The **Shift Setting** is use for updating shifts depending on the scheduled time. 50 different shifts can be set. **Shift Time Setting** is set to determine the start and end of the shift per day. **Lunch Time Setting** is set for the start and end of lunch break.

Instructions:

1. In updating the start and end of time setting whether it is Shift Time Setting or Lunch Time Setting, be sure to check first the checkbox to enable changes on the schedule time for the desired day.
2. Flexible in shift rules is for those are work in flexible working hour. It can fix the working hour length manually and also the length of work computation.
3. Flexible in lunch rules is for those who are not fix their lunch. In lunch time setting you can set the early time they can out for lunch and the latest time they have back to work. Fix length for the lunch is base on the company.
4. Grace period can also be set in the text box depending on company's grace period preference.
5. Click Update button to save the changes made for a certain shift.
6. Click Cancel button to ignore changes and to close the window.

6.2 Employee Profile

The screenshot shows a software window titled "Employee Profile - [Edit]". It contains several sections for data entry:

- General Information:** Fields for Enroll No. (34952), Employee No. (S-34952), First name (DINH), Last name (DINH), Middle name (TRONG), Address, Place of birth, Gender (Male), Birth Date (04/01/2008), Nationality (VIETNAM), Telephone no., and MIRC.
- Company/Department/Position:** Company (HOME FIX (M) SDN. BHD.), Department (FOREIGN WORKER), and Position (STORE OPERATOR (NS)).
- Date of hire:** 01/12/2007.
- Shift:** Shift 6.
- Status:** Full Time.
- Photo:** A photo of a young man is displayed. Buttons for "Load Picture" and "Unload Picture" are present.
- Restday:** Checkboxes for Mon, Tue, Wed, Thu, Fri, Sat, and Sun. Sun is checked.
- Exemption:** Checkboxes for Lates and Under Time.
- Holiday Group:** Group 1.
- Shift IN/OUT Mode Setting:** Checkboxes for Check In, Break Out, Break In, Check Out, OT In, and OT Out.
- Note:** A text area for additional notes.
- Leave:** Checkboxes for Annual Leave (18 day/s) and Medical Leave (14 day/s).

On the right side of the window, there are three buttons: "Save and New", "Save and Close", and "Cancel".

The **Employee Profile** is use to keep employee information on the system. It can be sorted as to Department, Gender or All. The grid shows the employees enrolled in the system.

Adding New Employee:

- By clicking the New Button, the above window will appear. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor username and password should be key in to continue
- Enroll number is the number that the device reads for logging purposes. It is automatically provided but can be changed depending on the new employee. Enroll number must be numeric in value.
- Employee number is also the employment number given by the company.
- Provide the necessary information like first *name*, last *name*, middle *name* (complete middle name), and *address*, place of birth, gender, birth date, nationality, and telephone number.
- Provide employment information like department, position, date hired, shift assigned, work status (whether probationary, full time, part time, or contractual), verify mode (whether FP – fingerprint, or proximity card), and notes.
- Check the days of the week in the Days Offs where an employee has no work.
- Check also the Exemption for late and early leave. This portion is optional because only managerial positions usually are entitled for such exemptions.
- Check the Annual Leave if the employee is entitled to. Enter the leave-day-number on the box.
- Click Load Picture button to add a picture and click Unload Picture button to remove it.
- The Save and New button saves the employee record and add another.
- The Save and Close button saves the employee record and closes the window.
- Click Cancel to ignore all changes made.

Editing Existing Employee:

- a) By clicking the Edit button, the screen above will appear.
- b) Employee information is automatically retrieved in the fields provided.
- c) Change the information in the field that needs to be edited.
- d) Click Save and Close to save changes made and to close the window.
- e) Click Cancel to ignore all changes made.

Search Existing Employee:

- a) Click the Search button and the screen above will appear.
- b) Employee can be searched through Employee Number, Enroll Number and Name.
- c) Choose the employee data in the list below or type it in the text box provided.
- d) Click OK button if the Employee name was retrieved or Cancel to close the window.

Deleting Existing Employee:

- a) Click the Delete button and the message above will appear.
- b) Choose Yes to delete employee record or No to cancel delete.

7. Preferences

7.1 Department

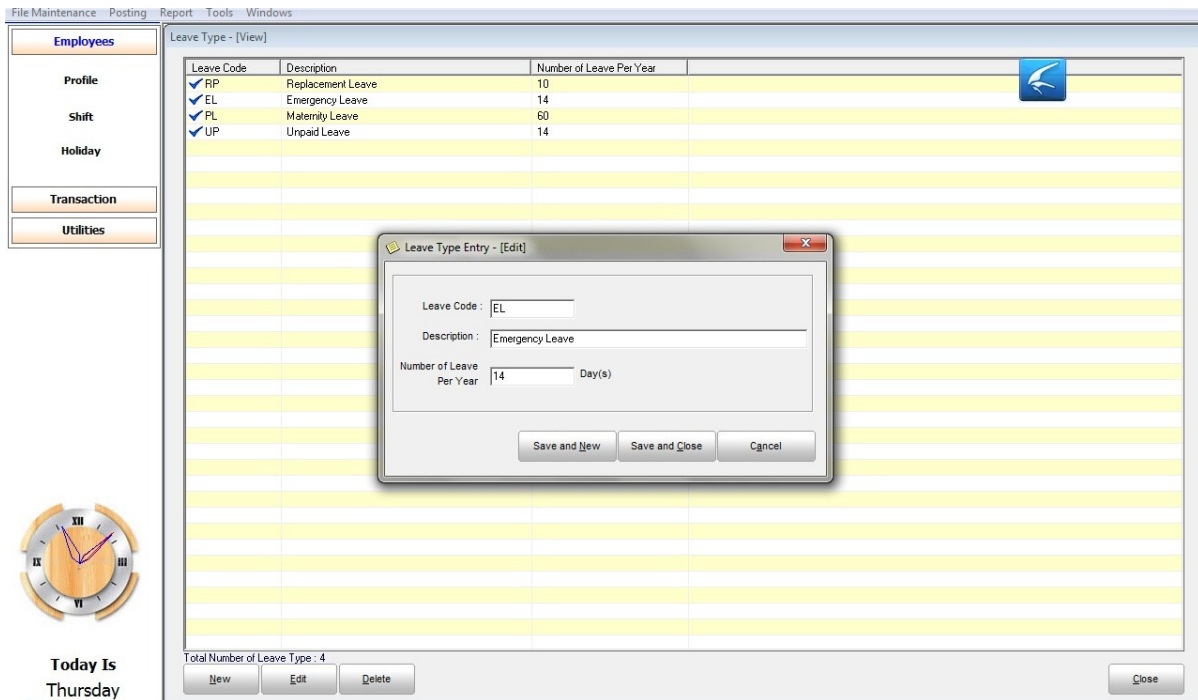

Department is used to create a department in the company where an employee may belong. The grid shows the name and description of existing departments.

Instructions:

1. By clicking the new button, the above window will appear.
2. Provide the name and brief description of the department you want to add in the field provided.
3. Click Save and New button to save the created department and to add another.
4. Click Save and Close button to save the created department and to close the window.
5. Click Cancel button to ignore the department created and to close the window.

7.2 Leave Type

Leave Type is use to create leaves to be used by an employee when applying for leave. The grid shows the leave code, description and number of leave per year of existing leaves.

Instructions:

1. By clicking the *new button*, the above window will appear.
2. Provide the leave code (2-digit code), brief description, and number of leave per year (numeric value counted as days) of the leave in the field provided.
3. Click Save and New button to save the leave made and to add another.
4. Click Save and Close button to save the leave made and to close the window.
5. Click Cancel button to ignore the leave made and to close the window.

Editing Existing Leave:

Instructions:

1. Click Edit button and the window same as in *new button* will appear.
2. Only the description and number of leave per year can be changed in Edit mode. The leave code cannot be changed.
3. Click Save and New button to save the leave made and to create another.
4. Click Save and Close button to save the leave made and to close the window.
5. Click Cancel button to ignore the leave made and to close the window.

Deleting Existing Leave:

Instructions:

1. Click the Delete button and the message above will appear.
2. Choose Yes to delete existing leave or choose No to ignore delete.

7.3 Holiday

Holiday Entry - [Edit]

Holiday Date From: 01/01/2010 To: 01/01/2010

Holiday Description: NEW YEAR

Type: LHP

OT Rate: 3.0

LEGEND :
SHP Special Holiday
LHP Legal Holiday Pay

Save and New Save and Close Cancel

Holidays is use to create a holiday that will be used as basis for allowing employees not to work for that particular holiday. The holiday made will be reflected in the monthly time record of every employee.

Adding Holidays:

Instructions:

1. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor Username and password should be key in to continue.
2. Specify the range of date for the holiday on its respective field. Select FROM as the start date and TO as the end date of the holiday.
3. Enter a specific description of the holiday on the description field.
4. Specify the type of holiday whether SHP (Special Holiday Pay) or LHP (Legal Holiday Pay). The holiday type will be reflected on the monthly time record of the employee.
5. Specify the OT Rate if the worker come to work on the holiday date.

Deleting Holidays:

Instructions:

1. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor username and password should be key in to continue.
2. There are two ways to delete holidays. One is by *Delete* the other one is by *Delete All*.
3. To delete a specific holiday, click the row in the grid of the holiday and click the Delete button then a message box will be prompted. Choose Yes to delete the holiday or No to ignore delete.

Click *Delete All* button to delete all holidays. A message box will be prompted. Choose Yes to delete all holidays or No to ignore delete.

8. Posting

8.1 Changes Shift

The screenshot shows the 'Change Shift' dialog box in a software application. The dialog box is titled 'Change Shift' and contains a list of employees on the left, a 'Select Department' dropdown, and a 'Name' dropdown. Below these are date range selectors ('Date From' and 'To'), a 'Shift ID' dropdown, and several checkboxes for enabling shift rules: 'Customize Shift Schedule', 'Lunch Rule Enable', 'Morning Teabreak Rule Enable', 'Afternoon Teabreak Rule Enable', and 'OT Rule Enable'. Each rule has associated start and end time fields. At the bottom, there are 'Save' and 'Close' buttons. The background shows a sidebar with 'Employees', 'Profile', 'Shift', 'Holiday', 'Transaction', and 'Utilities' tabs, and a clock icon indicating 'Today Is Thursday'.

Changed shift- is use to adjust the existing shift of an employee for a certain range date and time. Changed shifts can be sorted out by choosing *from* and *to* date which is the range for sorting. After choosing the range, changed shift information is shown in the grid.

Adding New Shift Change:

Instructions:

1. By clicking the *New Button*, the above window will appear.
2. Select the Department and the Name of the employee that wants a change in shift.
3. Click *Select Button* to add the name of the employee to the grid or click ALL to add all employees to the grid.
4. Check the Shift Rule Enable to be able to change the shift date and time.
5. Select **base on the shift ID schedule**, set the OT rule enable time start and end time. Or
6. Select the **Customize Shift Schedule** set time of the start and end of the shift-change.
7. Check the Lunch Rule Enable to change the lunch time for the changed shift date.
8. Select the time of the start and end of the lunch shift.
9. Click Save button to save the shift change made or click Close button to ignore shift change made and to close the window.

Deleting Shift Change:

Instructions:

1. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor Username and password should be key in to continue.
2. There are two ways to delete shift change. One is by *Delete* the other one is by Delete All.
3. To delete a single leave, click the row on the grid of the shift code and click Delete button then a message box will be prompted. Choose Yes to delete the shift change or No to ignore delete. Click Delete All button to delete all shift change. A message box will be prompted. Choose Yes to delete all shift change or No to ignore delete

8.2 Time Card

Device No	Enroll No	Date & Time	VerifyMode	InOutMode	Username
0	34787	16/03/2010 7:43	Ins	CI	supervisor
0	34787	16/03/2010 12:01	Ins	CI	supervisor
0	34787	16/03/2010 13:43	Ins	CI	supervisor
0	34787	16/03/2010 20:43	Ins	CI	supervisor

Time Card shows the logs of every employee for a particular date range. The grid shows the logs entered in the system for the chosen date range together with other information like the device number and the enroll number of the device; username of the employee are also included. One log is equal to one transaction. You can sort the transactions by the range of date by choosing FROM as the starting date and TO as the end date. To view employee transaction, specify his or her name to do so.

Adding New Transaction:

Definitions :	
CI	Check - In
CO	CheckOut
OFL	Out for Lunch
IFL	In from Lunch
OTI	OT - IN
OTO	OT - OUT

Instructions:

1. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor Username and password should be key in to continue.
2. The Name is automatically added when you select an employee on the Time Card window.
3. Select the date that you want to create the new log on the *Date Field*.
4. Select the time that you want to create the new log on the *Time Field*.

5. In the In/Out Mode, specify if the log is CI (Check In), CO (Check Out), OFL (Out For Lunch), IFL (In From Lunch), OTI (OT In), or OTO (OT Out).
6. Click Save and New button to save the log made and to create another one.
7. Click Save and Close button to save the log made and to close the window.
8. Click Cancel button to ignore all the changes made.

Deleting Transactions:

1. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor Username and password should be key in to continue.
2. There are two ways to delete transactions: One is by *Delete*, the other one is by *Delete All*.
3. To delete a specific transaction, click the row on the grid of the transaction and click *Delete* button. A message box will be prompted. Choose Yes to delete the transaction or No to ignore delete.
4. Click *Delete All* button to delete all transactions. A message box will be prompted right after. Choose Yes to delete all transactions or No to ignore delete.

8.3 Leave Application

The screenshot displays the 'Leave - [View]' application window. On the left, a sidebar contains buttons for 'Employees', 'Profile', 'Shift', 'Holiday', 'Transaction', and 'Utilities'. The main area features a table with columns: Leave ID, Enroll No, Name, and Date(From-To). A 'Leave Entry - [Add]' modal dialog is centered over the table. This dialog has the following fields: 'Leave ID' (LV2410111536), 'Entry Date' (04/02/2010), 'Employee No.' (Y02), 'Enroll No.' (1), 'Employee Name' (YONG HUEI SHAN), 'Time Range' (From: 04/02/2010, To: 04/02/2010), 'Count AS' (Whole Day), 'Leave Type' (Annual Leave), and 'Reason'. At the bottom of the dialog are 'Save and New', 'Save and Close', and 'Cancel' buttons. The main window's status bar shows 'Total Number of Leave : 0' and buttons for 'New', 'Edit', 'Delete', 'Delete All', and 'Close'. A clock icon and 'Today Is Thursday' are visible in the bottom left corner.

Leave Application can only be access by the supervisor. It is use to grant permission for leave by a requesting employee. The grid shows the employee who requested for a leave and the date range of the request.

New Leave Application:

Instructions:

1. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor Username and password should be key in to continue.
2. On the Entry Date field, enter the date the request was approved.
3. On the Employee Name field, search for the employee's name who request for a leave. After retrieving employee's name, the Employee No and Enroll No are automatically retrieved as well.
4. On the Time Range field, enter the date range of the application in the FROM as the starting date and TO as the end date of the leave.
5. On the Count As field, specify if the leave in the Time Range is WD for whole day or HD for half day.
6. On the Leave Type field, specify the type of leave depending on the type of leave made on the Leave Type module.
7. The reason why the leave was applied for should also be indicated.
8. Click Save and New button to save the leave application and to create another one.
9. Click Save and Close button to save the leave application and to close the window.
10. Click Cancel to ignore all changes made and to close the window.

Deleting Leave Application:

Instructions:

1. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor Username and password should be key in to continue.
2. There are two ways of deleting leave application. One is by *Delete* the other one is by *Delete All*.
3. To delete a single leave, click the row on the grid of the employee who request for leave and click DELETE button. A message box will be prompted. Choose Yes to delete the application or No to ignore delete.
4. Click Delete All button to delete all leave applications. A message box will be prompted. Choose Yes to delete all application or No to ignore delete.

8.4 OT Authorization

OT Authorization can only be access by the supervisor. It is use in authorizing an employee who is requested to work over time. The grid shows the type of Over Time Code, which is computer generated that shows the employee who is requested to work over time. The range of date and the reason for over time for that range of date is also shown.

Adding OT Authorization:

Instructions:

1. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor username and password should be key in to continue.
2. On the Select Department field, specify the department of the employee who is requested to work overtime.
3. On the Name field, search for the name of the employee with the use of the following information, last name, first name, middle name and enroll number.
4. When the name was retrieved, click on the *Select Button* to add the First Name, Last Name, Middle Name and Enroll Number of the employee to the grid.
5. Click *All Button* to add all employees to the grid.
6. Choose date range for the over time. Click on FROM to set the starting date and TO for the end date.
7. Reason for overtime work should also be indicated.
8. Specify the start and end time of the over time on the specified date range.
9. Minutes Add means computation will back forward from your OT time start setting.
10. Click on the *Save* button to save over time authorization.
11. Click on the *Close* button to ignore changes made and to close the window.

Deleting OT Authorization:

Instructions:

1. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor username and password should be key in to continue.
2. There are two ways to delete OT authorization. One is by *Delete* the other one is by *Delete All*.
3. To delete a single leave, click the row on the grid of the overtime code and click Delete button. A message box will be prompted. Choose Yes to delete the authorization or No to ignore delete.
4. Click Delete All button to delete all OT authorization. A message box will be prompted. Choose Yes to delete all authorization or No to ignore delete.

4. Select the drive and directory where you want to save the file.
5. Click the Export button to start the transfer of data in the file created.
6. Click Close button to close the window and ignore exporting of data.

10.5 IMPORT DATA

10.51 Import Employee Info

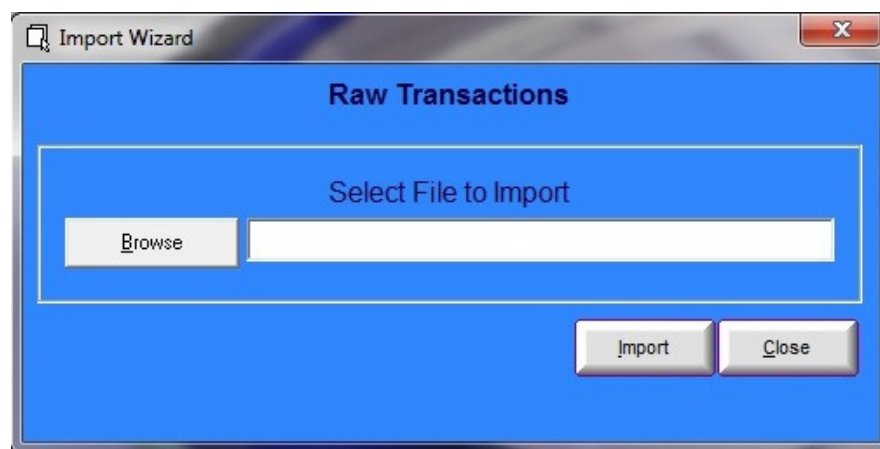

Import Employee Info is used to restore the exported data to be used by the system. Data imported will be added in the system and the present data will not be lost. Data that can be imported are employee information.

Instructions:

1. Click Browse button to locate the exported data in its specified location.
2. Click Import button to start the importing of data in the system database.
3. Click Close button to ignore the importing of data and close the window.

10.52 Import Transaction

Import Transaction is used to restore the exported data to be used by the system. Data imported will be added in the system and the present data will not be lost. Data that can be imported are employee attendance transaction.

Instructions:

1. Click Browse button to locate the exported data in its specified location.
2. Click Import button to start the importing of data in the system database.
3. Click Close button to ignore the importing of data and close the window.

10.53 Import USB Transaction

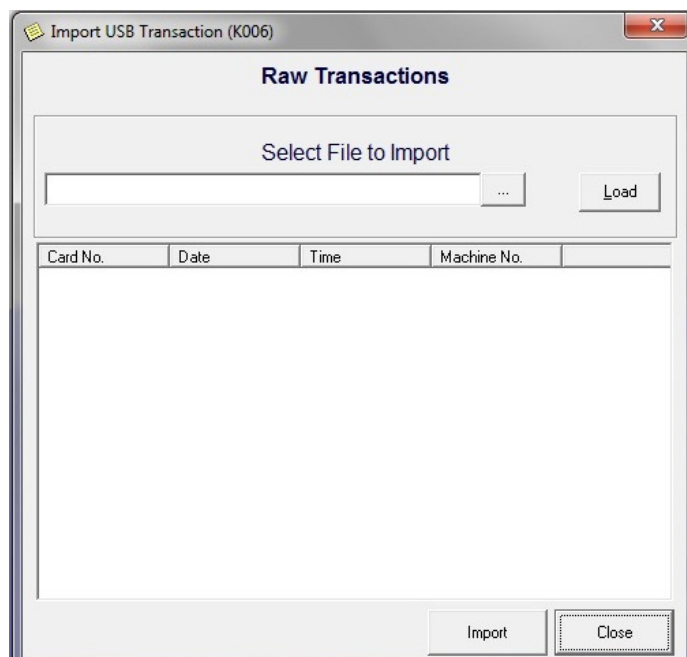

Import USB Transaction is used to restore the exported data from the machine **CL-918 / CL-928 / CL-938 (AGL_001)** to be used by the system. Data imported will be added in the system and the present data will not be lost. Data that can be imported are employee attendance transaction.

Instructions:

4. Click Browse button to locate the exported data in flash disk as file name **(AGL_001)**.
5. Click Import button to start the importing of data in the system database.
6. Click Close button to ignore the importing of data and close the window.

10.54 Import USB Transaction (K006)

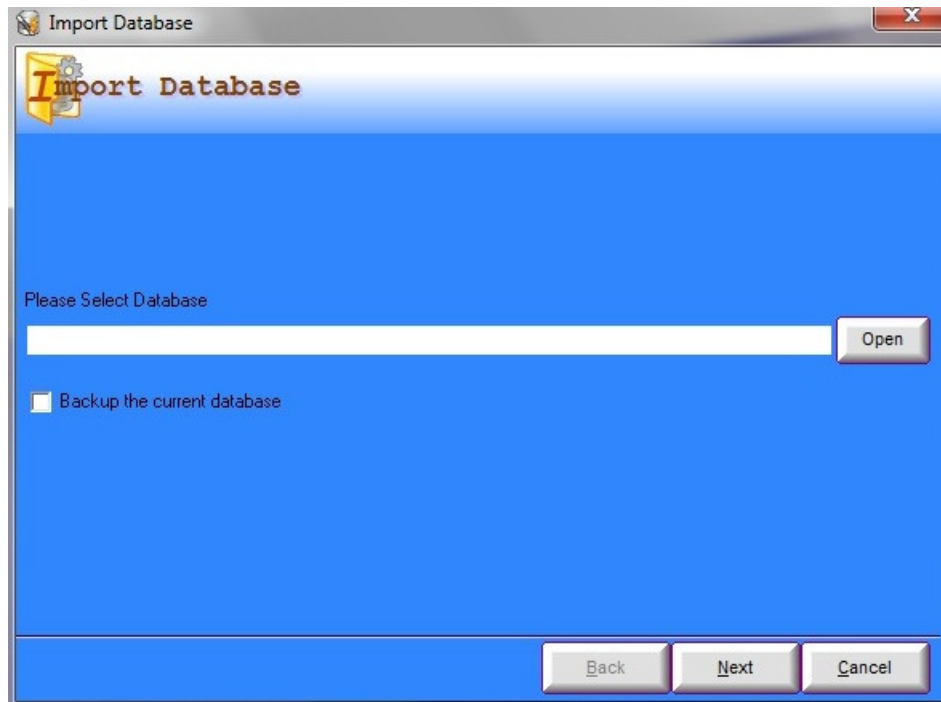

Import USB Transaction (K006) is used to restore the exported data from the machine **K006** to be used by the system. Data imported will be added in the system and the present data will not be lost. Data that can be imported are employee attendance transaction.

Instructions:

1. Click **Browse** button to locate the exported data in flash disk .
2. Click **Load** button to loading the transaction.
3. Click Import button to start the importing of data in the system database.
4. Click Close button to ignore the importing of data and close the window.

10.55 Import Old Database

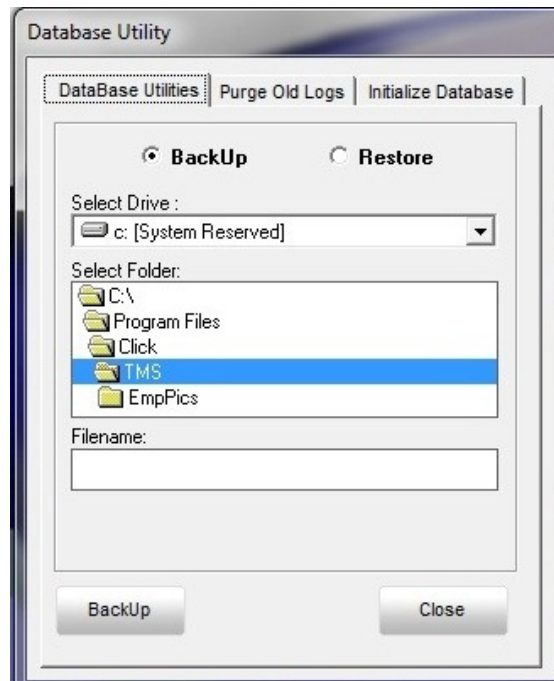

Import Old Database is used to restore the exported old data to be used by the system. Data imported will be added in the system and the present data will not be lost. Data that can be import the old database we had backup before.

Instructions:

1. Click **Browse** button to locate the "**Pay_data**" access file in its specified location.
2. Click **Open** button to select the data you want to import then press **Next** button. .
3. Click Close **Finnish** button to close the window.

Database Utility is used to backup, restore, purge and initialize the database of the system. It is done so that the transferring of data is easier and no data will be lost.

10.61 Backup Database:

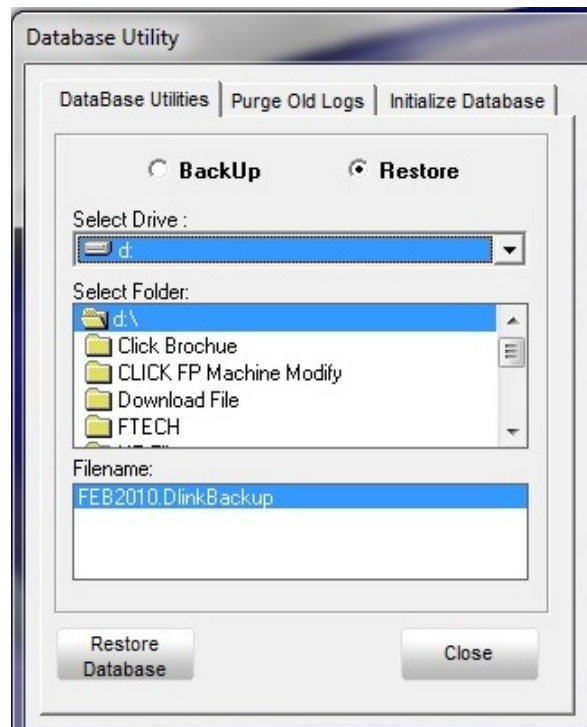

Backup of Database is used to create a copy of the current database to be stored in a specified folder to be restored to a different computer station or for record keeping.

Instructions:

1. Choose the BackUp option.
2. Select the drive and the folder where you want to backup the database.
3. Enter a Filename for the backup of database.
4. Click Compact button if you want to minimize the size of the database currently used before backup.
5. Click BackUp button to start the backup process. User will be unable to login not unless he secures authorization from a Supervisor. Supervisor username and password should be key in to continue
6. Click Close button to close the Database Utility window.

10.62 Restore Database:

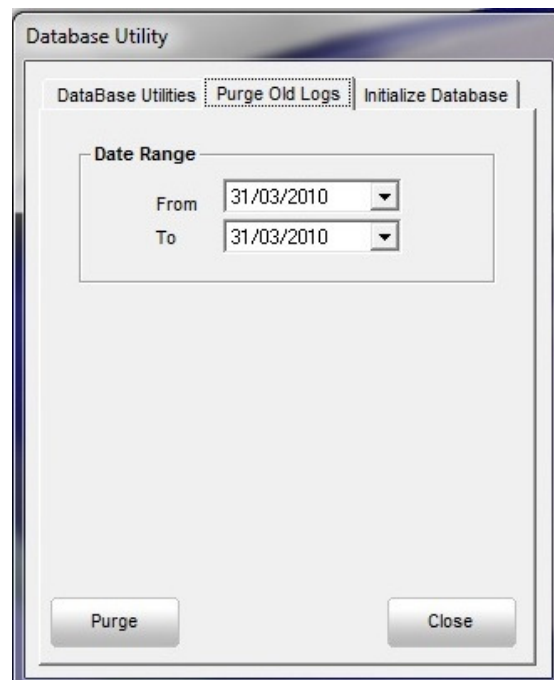

Restore of database is used to retrieve the backup database that came from another working station. It is useful especially in times of data lost.

Instructions:

1. Choose the Restore option.
2. Select the drive and the folder where the backup of the database is located.
3. Choose from the list the name of the database to be restored.
4. Click Compact button if you want to minimize the size of the database after restoration.
5. Click Restore button to start the restoration process. The Log In screen will appear unless you are a Supervisor. Provide the Supervisor User Name and Password to continue.
6. Click Close button to close the Database Utility window.

10.63 Purge Old Logs:

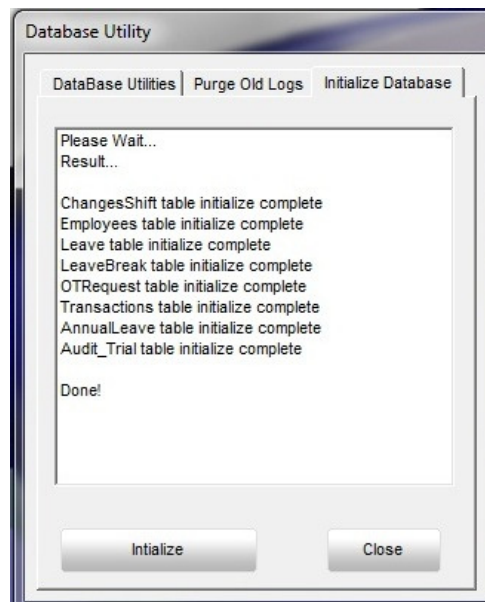

Purge Old logs is deleting all logs or transactions that occurred on the date specified.

Instructions:

1. Click the Purge Old Logs tab.
2. Select the range of date of data to be purge.
3. Click the Purge button to start the purge process. The Log In screen will appear unless you are a Supervisor. Provide the Supervisor User Name and Password to continue.
4. Click the Close button to close the Database Utility window.

10.64 Initialize Data:

Initializing database is deleting all data in the database. It is useful in starting transactions for every year-end.

Instructions:

1. Click the Initialize Database tab.
2. Click the Initialize button to start the process. The Log In screen will appear unless you are a Supervisor. Provide the Supervisor User Name and Password to continue.
3. The initialized tables in the database are shown in the list.
4. Click the Close button to close the Database Utility window.
